

Moorestown Community House Goes Green With Hutchinson

CHERRY HILL, NJ (October 20, 2015) – Like most nonprofits, Moorestown Community House (MCH) - the icon of historic Moorestown - is conscious of every penny spent. So when it came time to upgrade lighting and AC units to ensure a comfortable environment for its tenants and other customers who rent out space for events, MCH's Executive Director looked for options that would not only save on costs but be good for the environment, too.

MCH turned to Hutchinson, a regional provider of energy services, to come up with a solution. After performing a free energy assessment, Hutchinson determined that through Direct Install - offered by the NJ Office of Clean Energy - MCH was eligible for energy efficient upgrades and incentives that covered 70 percent of the cost to replace outdated lighting and AC units.

Hutchinson upgraded the majority of MCH's lighting to LED, including outdoor areas and the parking lot, and installed upgraded, energy efficient AC units.

"We seek out the latest strategies and technologies to help nonprofits like Moorestown Community House, businesses and government facilities reduce energy consumption and improve their bottom line," said Ed Hutchinson, president, Hutchinson. "Our turn-key solutions make it easy for nonprofits and businesses to become more energy efficient, cut expenses and go green."

To learn more about Hutchinson and its energy service offerings, contact Dicoordinator@hutchbiz.com or call 888-777-4501 to schedule an energy assessment. Hutchinson's technicians are factory trained, NATE certified and are on-call 24/7 365 days a year. Visit www.hutchbiz.com for more information.
